SEO STRATEGY FOR OXFAMS EXTERNAL WEBSITE 7

1. INTRODUCTION

This report provides a strategic evaluation of content management for Oxfam the primary objective of it being I identifying a platform that will help grow Oxfam global digital outreach, support future grown and streamline content operations. CMS is crucial order to maintain an effective and accessible website. This report investigates the needs of the organisation via secondary user research reviews three potential CMS platforms which might be suitable for what they do, and it will evaluate a prototype website developed with SharePoint to showcase key functionalities. additionally, the report provides recommendations for structures of governance, search engine optimisation (SEO) strategies and will conclude with informed suggestions for Oxfam's future CMS implementation to enhance their digital outreach.

2. Secondary User Research

Oxfam is a global confederation of in depended on charity organisations which work in a collaboration to deal with poverty, inequality and injustice across over countries worldwide. Established in 1942 in oxford during world war as the oxford committee for famine relief. The organisation has evolved into one of the leading humanitarian agencies with a comprehensive mission which covers emergency response, long term development programs and advocacy from systematic change. According to Oxfam annual report (OXFAM AMERICA, 2022)the organisation reached 204 million people through its Programs while working with their partners help other people , they generated an income of 409 million pounds globally (Oxfam, 2023).the organisation has approximately over 10,000 staff members and over 31,0000 volunteers who are distributed all across the world which makes its digital Infrastructure very important for coordination fundraising and stakeholder engagement (OXFAM AMERICA, 2024).Oxfam work can be categorised mainly in five core areas: humanitarian response to emergencies and disasters, sustainable livelihoods and economic justice, gender justice and women's rights, climate justice and environmental sustainability, and advocacy for policy change at local and international levels. And their digital platform is very vital since it's their primary donor enjoyment, volunteer requirement, educational resource distribution, campaigning mobilisation and awareness building platform.

The organizations primary user groups include individual donors from one-time donors to the regular monthly ones, corporate supporters, cooperate partners institutional funders, volunteers, campaigners' activists, educators seeking resources media professional and beneficiaries in developing regions seeking for information and support (Oxfam, 2023). An analysis done by (Nonprofit Tech for Good, 2023)good revealed that 68% OF CHARITY WEBSITE VISITORS ACCES the sites via mobile phones and there is peak traffic when there is a humanitarian crises and major campaign launches. The demographic for the international organisations is mostly people aged 18- 35, especially around climate justice and climate justice and social campaigns. the user research al reveals that most website visitors typically look for quick access to the donation portal s campaign information and education resources for 3- 5 mins and for transactional visits and there is longer sessions upward of 12 minutes for educational content consumption(Nonprofit Tech for Good, 2023). In addition to that Oxfam servers a multilingual audience across the world who require content accessibility for their languages to effectively engage stakeholder groups.(OXFAM AMERICA, 2024)

2.1 Key Considerations for CMS Selection

I. **Support For Multi-Audience Content delivery**
Oxfam operates in many countries and has helped millions of people who speak many languages for this reason their CMS must therefore support Multilanguage content, mobile responsive and fast loading pages for the users on low bandwidth connections since some will be in war torn areas where there are connection problems.

II. **Ease of Use for Non-Technical Staff**
The CMS must allow staff members who lack IT skills to be able to create edit and publish content without coding knowledge with minimal training .it should have drag and drop interfaces, predesigned templates and intuitive workflows to empower local teams to tell their own stories quickly especially in war torn areas.

III. **Secure and integrated Donation Functionality**
One of the ways Oxfam gains revenues of through individual donors who end up collectively donating millions. The website must be able to facilitate trustworthy, seamless donation experiences.

IV. **Scalability and Integration potential**
Oxfam works with many partner organisations. Even though the public website maybe not host all partners, the CMS should allow future integrations with other platforms like Customer relationship Management systems, email platforms and analytic tools to measure engagement and optimise their outreach.

V. **Cost Effienct and Sustainability**
As a charity organisation Oxfam must manage the funds they receive responsibly. the CMS should have a low cost of ownership: minimal licensing fees, affordable hosting and low maintenance demands.

3. Review of Content Management Systems

This section will explore three popular CMS tools to come up with the best choice for Oxfam's and each of the CMS will be

I. WordPress

World press is one of the most popular open sources CMS tools which has been used to power many websites on the global internet.

Advantages

- **Ease of Use:** it has got an intuitive dashboard with visual editors which makes it accessible for non-technical users to create and manage content without coding knowledge.
- **Extensive Plugin Ecosystem:** it allows for integration of plugins like GiveWP or Charitable which enable a secure branded donation forms with recurring gifting options which can be very good for Oxfam since they also rely on individual donors
- **Strong SEO capabilities:** they have a built-in compatibility with plugins like Yoest SEO or Rank Math which allow for optimisation of page titles, meta descriptions and schema markups which are important for reaching their supports via searches

Disadvantages

- **Security vulnerabilities:** the use of popular plugins can introduce risks if they are not regularly updated.
- **Performance issues:** when there are too many themes or too many plugins, they can end up allowing down the site which is quiet problematic for users in low bandwidth regions.
- **Limited workflow control:** even though WordPress has got user roles but for complex editorial approval chains, they require additional plugins or custom development

II. Drupal

Drupal is a very powerful open-source enterprise level CMS which is known for scalability security and structured content Management .and it is already widely used by other charity organisation.

Advantages

- **Robust Security:** it has got built in protection against common threats like SQL injections this makes it ideal for Oxfam for handling sensitive data about doors operations in politically sensitive Contexts.
- **Advanced Content modelling:** It supports custom content types with re-usable field which is a perfect fit for Oxfam's diverse programmes.
- **Strong Multilingual and Accessibility Compliance:** it fully supports WCAG 2.1 AND RLT languages out of the box which ensures inclusivity for a global audience like the one Oxfam has got
- **Strong Multilingual and Accessibility Compliance:** it fully supports WCAG 2.1 AND RLT languages out of the box which ensures inclusivity for a global audience like the one Oxfam has got.

Disadvantages

- **Steep Learning Curve:** it requires some type of technical expertise to set it up and manage non-technical staff may have issues without the developers support.
- **Higher Development Costs:** Custom themes/modules often require professional developers which will end up increasing long term Total Cost of Ownership.
- **Slower Content Publishing:** The interface which is intuitive than other CMS like WordPress which potentially may delay urgent updates during fast moving humanitarian crises.

III. Joomla

Joomla is a free and open-source CMS which is positioned between WordPress and Drupal in terms of complexity.

Advantages:

- **Flexible access Control:** the CMS allows for its users to clearly define the custom user roles with precise abilities.
- **Built in functionalities:** it includes user groups, access levels and multilingual support without having to rely on plugins there by reducing the dependency on third party extensions.

Disadvantages

- **Smaller Ecosystem:** it has got fewer themes, plugins and developer support compared to the other CMS which limits the customisation options.
- **SEO limitations:** it lacks SEO capabilities which means it requires extensions to have full SEO control same with the Default URLs they are less search engine friendly.
- **Declining Market Share:** Joomla powers very few websites compared to the other CMS which raises concerns about the long-term community support.

4.Evaluation of Site

5. Governance Recommendations

- **Content management Roles and Permissions:** They should set up a tiered permissions structure within the SharePoint CMS with clearly defines roles. For example, a small team made up of senior communications staff should be the site administrators and should be the ones allowed to have full control over the whole site settings, user access and big changes. editors from other teams should be able to create and edit and submit content within their designated sections. Content approvers will be department heads who will have to read and approve before submission(Boiko, 2022). Campaign coordinators and volunteers should have limited access to the resources and submit drafts without having publishing rights. this hierarchy ensures quality control while enabling distributed content creation across Oxfam global network(Jisc, 2023).
- **Content Quality and Brand Guidelines:** There should be a comprehensive style guide and content governance policy Should be documented and should be available for everyone through the SharePoint. There should be regular quarterly audits done of the website to identify outdated information, broken links and if there are pages that need updating(Rockley, Cooper and Halvorson, 2012). And it's important for the event Callender to be updated collaboratively to ensure strategic alignment. Designating a content governance lead responsible maintaining standards and conducting training sessions.
- **Security and Access Management:** when doing quarterly checks of user access permissions for the staff who have changed roles or left the organisation should be removed(National Cyber Security Centre (NCSC), 2024). Multifactor authentication must be mandatory for all users with editing permissions to protect sensitive donor data and financial information. There should be clear protocols for password management and session timeouts. regular backups with tasted restoration procedures should be done to protect against data loss from accidental deletions or technical failures
- **Training and Support Framework:** Establish a procedure for onboarding new content editors for example hands on training. Appoint SharePoint regional leaders who will have to receive advanced training and these ones should be able to provide support to their colleagues(Institute of Personnel, 2023).
- **Performance monitoring and continues Improvement:** implement regular monitoring using SharePoint analytics and google analytics into track monthly reports and should track page load times, user engagements and the number of users who are ending up donating(Kaushik, 2009).

6.SEO STRATEGY FOR OXFAMS EXTERNAL WEBSITE

Search Engine Optimisation (SEO) is a methodology that allows website or a web page to improve and maximise the frequency of organic traffic from search engines
